

Teo Screenshare

Share your screen from the Teo Softphone with up to 100 participants. Screensharing requires no plugins or applications to install for viewers. They simply open the link you share with them in any HTML5 compatible browser. You can share your screen with mobile and tablet users as well, seamlessly. This is a superior method to share and collaborate on content because it avoids spending the first several minutes of every meeting trying to do troubleshooting instead of being productive. The Teo UC softphone also enables you to simultaneously conduct video calls, message other participants as a group or via private messaging, all while monitoring presence, and readily bridging in other participants all in real time.

“Teo Unified Communications is an integrated collaboration suite so your team can accomplish tasks more efficiently with less communications friction.”
